

PARCO Perimeter Guarding

Parco's perimeter guarding is quick and easy to purchase and assemble. Using T-slotted aluminum provides all the flexibility the industry needs, and meets OSHA and ANSI requirements.

Our perimeter guarding is built with T-slotted aluminum, 1/4" clear polycarbonate, or 12 gauge PVC-coated carbon steel with 1x1" square in black or yellow. We use a deluxe floor mount base plate on all verticals for the strongest possible guard. They are also slotted for lateral adjustment without lagging to the floor. Door units have deadbolt locks with plastic handles and aluminum hinges. All units are attached with our anchor fasteners for a quick and clean installation.
